

# BUILD YOUR HOME IN GRANDVIEW!

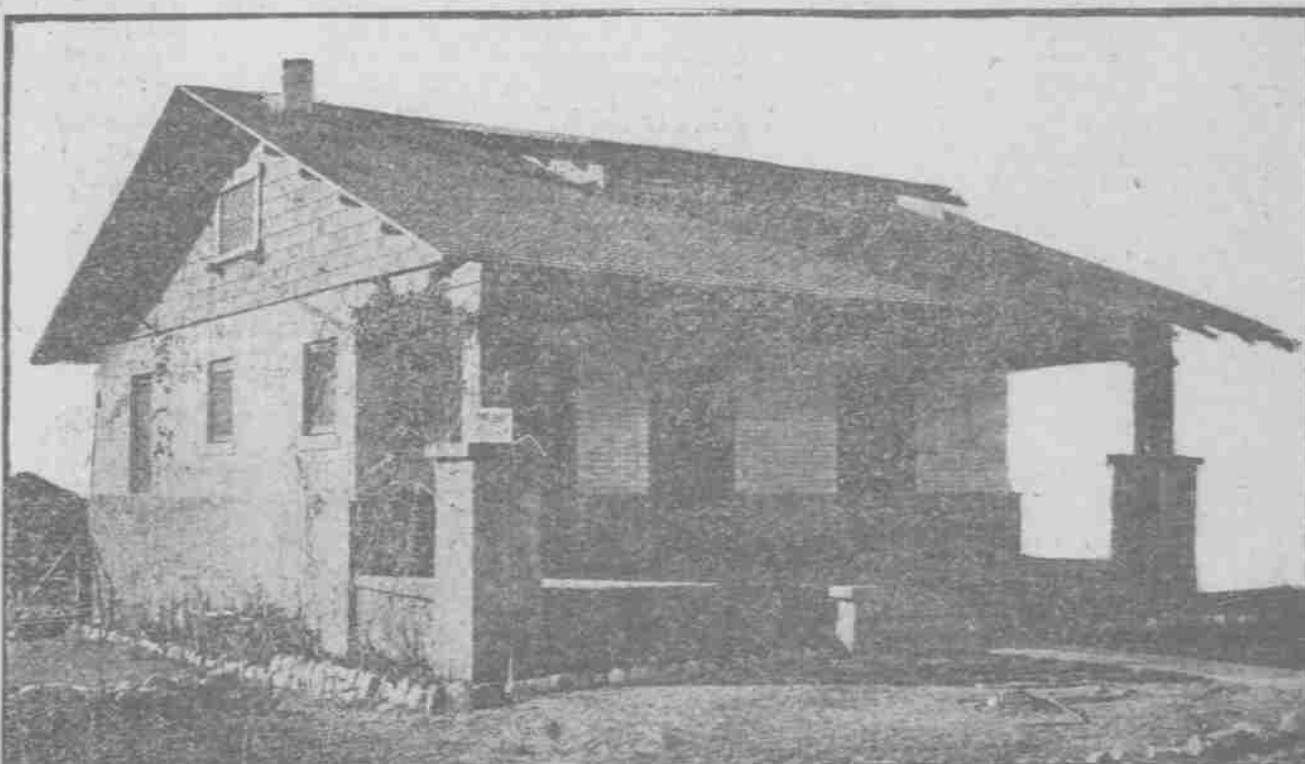

And You Will Always Be Secure in the Fact That Your Property Represents an Investment That Will Increase Steadily in Value. Over \$62,000 Worth of New Homes Are

now under construction here—homes that are artistic—that add value to every lot in the addition. The wonderful building activity in Grandview is due to its superior location—its freedom from the smoke and dust of the city—its superior car service and its modern improvements. Grandview has electric lights, telephones, pure mesa water, a splendid paved boulevard, and as beautiful a view as can be had in El Paso or any of its suburbs. Lots are selling fast and we would suggest immediate action on your part for the company's holdings can't last much longer—then you'll probably have to pay more.

Geo. W. Sharp, builder.  
Home of C. F. Spears, Lots 21-22, Block 81, Grandview Addition.

Prices are still low and terms are easy. We have some choice lots left and if you'll phone us for an appointment will be glad to show you in our automobiles. You will enjoy the trip.

Built by Geo. W. Sharp.

### HAS LEASE ON THE OLD EXCESS MINE

Bradley Has Also Secured the Rambler Mine, in Victorio District.

W. L. Bradley, an El Paso mining man, who has been operating in the old Victorio mining district west of Deming, N. M., has been in town and reports a renewal of mining operations in that district. He has had the old Excess mine, owned by St. Louis people, under lease and bond for the past year, and says that the property to date has produced over 1000 tons of good lead carbonate ore. He has recently acquired the Rambler mine, adjoining the Excess, and is now equipping it with heavy pumping and hoisting machinery, with a view to exploring both properties at considerable depth.

These properties are a part of the old Victorio group, worked by the late senator Hearst and associates in the '80's, and has a record production of something over \$200,000, and was recently sold by the Hearst estate to Dr. J. T. Duryea, of the Coldwell Lead company, of New York.

Prospecting work was commenced on the Hearst properties last June under the management of F. K. Wyman, since which time some substantial bodies of lead-silver ore have been disclosed, and about 200 tons of the same shipped to the El Paso smelter.

"Work on the Corbett and Wyman properties," says Mr. Bradley, "has also been resumed and excellent results are offered. A good pocket has been opened at the surface, some good carbonates ore shipped and showing good indications for its continuance to great depth."

Although the Victorio camp has the record of big production, Mr. Bradley says that it has been produced above the water, and he believes the larger and richer values are yet to be disclosed below the water level.

The formation is an old dome overlain in some places with a late flow of andesite and intruded by porphyritic dikes similar in construction to the Santa Fe dikes of the Chihuahuan.

The prevailing good prices of the metals, he says, has stimulated prospecting and development in the Victorio district.

**Big Ore Shot in Beck Mine.**

C. R. Mott, superintendent of the National Gold and Silver Mining company in the Kinball district, Grant county, New Mexico, is at the Hotel Paso del Norte. He states that the east drift in the Halcyon vein is in a face of fine ore about six feet wide, which will average from \$20 to \$25 per ton in gold and silver. The drift is in about 500 feet east from the main shaft on the Beck.

### RAY CON. TO WORK RAY CENTRAL MINE

Report in Miami Says Magna Company Will Take Over Queen Copper Co. After January 1.

Miami, Ariz., Nov. 30.—The Ray Consolidated Copper company has completed arrangements to mine the Ray Central property. This production from this ore body will commence during the month of December, and the rate of tonnage will show a large increase over that of the past, and the percent of copper will be considerably larger.

It is said the Magna Copper company, one of the richest producers in Arizona, will obtain control of the Queen Copper company, of Globe.

S. W. H. John, president of the Johnsville Mining company, has resigned his position with the Miami Copper company, and assumed charge of the work now progressing on the company's property which consists of 12 claims in the Gold Gulch district, 10 miles southwest of Miami.

Jack McKinnon and a force of men are developing the Bell Springs group in the Ray-Superior district, adjoining the Calumet and Arizona and Douglas properties.

The Calumet and Arizona has put an additional force of men to work on the roads. When the electric current is turned on from the Ray Consolidated at Ray, or about the first of the year, it is expected that at least 150 men will be employed, developing the property.

The Douglas Copper company will be developed on a large scale next year by churning drilling, shaft and tunnel work. Money is guaranteed by eastern capitalists to develop the property, and engineers have been examining it for the past six weeks.

### IMPORTANT MINE CASE IS REMANDED

Bowman Wins Final Decision in Case Against Warnakroes in Coconino County.

Tombstone, Ariz., Nov. 30.—The state supreme court has handed down a decision in the case of Bowman vs. Warnakroes, that is of great interest to mining men generally. The case went to the supreme court from the district court of Coconino county when Arizona was a territory. The case involves the payment of 10 percent commission on the sale of certain claims to the Great Western Mining company, of Courtland, Bowman claims of Warnakroes 10 percent for making the sale; Warnakroes denies that Bowman made the sale and is entitled to no commission although Warnakroes admits that some time previous to the sale he did authorize Bowman to make the sale, but that Bowman was not in authority at the time the sale was actually made. The district court held for Bowman and Warnakroes appealed. The decision just rendered remands the case back to the superior court here with instructions to grant the Warnakroes demurrer.

In the federal court the hearing of the appeal of the bondholders of the Tombstone Consolidated Mines company bankruptcy has been set for hearing for December 23. As soon as this matter is finally settled there will be some definite policy announced regarding the big prospecting here.

### CRESWELL MAKES STRIKE AT STEINS

Finds Rich Copper Lode Which Is Believed an Extension of the Queen.

Steins, N. M., Nov. 30.—A new strike has been made by David L. Creswell in a claim he has been prospecting about seven or eight miles south of Steins. He has been for some time sinking in a low ridge to uncover the extension of the Queen lode and for a time it appeared a puzzling and blind proposition, as the surface was covered a few feet deep with the wash and detritus from the higher hills.

The Queen vein is a big lode about 15 feet wide running east and west, and a shaft about 35 feet deep and an open cut showed that it contained plenty of copper sulphides of shipping grade. On the dump of the shaft is nearly a car load of shipping copper ore. Creswell's claim lies about 200 feet west of and across the gulch from the shaft of the Queen. He sighted the "strike" of the Queen vein and decided that it ought to run through a certain spot beneath the gravel. With unerring judgment, he dug a hole and struck the vein. He has found the coveted copper lode. He has found the coveted copper lode. He has found the coveted copper lode. He has found the coveted copper lode. He has found the coveted copper lode.

Creswell also has a group of gold claims four miles north of Steins, which he calls the El Oro group, consisting of the Neille Gray and the El Oro Fox, which are relocations of the old Fox claims discovered in the early eighties of the last century when the apaches were thick in these parts. They killed nearly all the miners on the El Oro group and left the diggings empty before he left the diggings. They are extension claims that run north and south across Coconino canyon, and are a mile south of the old Volcano mine. Creswell's partners are D. R. and Charles Smith and Sam Olney. There is a big lode of quartz or quartz porphyry running through both claims. Indeed it is said the big lode is traceable for nearly two miles. Besides, there are series of parallel veins, and all of them are said to pan gold from the grass roots, and assay all kinds of values from three clear up to hundreds of dollars a ton in gold and silver. There are many locations all around the El Oro group and all of them show one same character of outcrops and values.

Creswell has a tunnel about 150 feet long, driven south into the Neille Gray hill on the south side of Coconino canyon. Seventy feet in from the portal is a shaft 15 feet deep from which a drift has been driven back to the north 20 feet. Now all these openings are in good milling gold-silver ore. It has increased in value with depth. The average of the tunnel clear along for 50 feet is \$24 per ton. At the bottom of the shaft the average value of the ore has increased to \$14 per ton. These values are in the proportion of two-thirds gold and one-third silver per ton, according to the samplings of J. C. Conklin and N. T. Tregear, two mining engineers. There is in sight a shaft 20 feet long, 50 feet deep and 14 feet wide, the upper portion of which runs over 35 per ton, and the bottom of which runs \$14 per ton. Over a thousand feet north on the Fox claim, a shaft 15 feet deep shows an eight foot face of ore running \$6 to \$8 per ton.

South of the El Oro group is the El

### YAUQUIS INTERFERE WITH SONORA MINE

La Barranca Mine and Mill Working to Capacity. Ora and Concentrates are Being Shipped to Douglas, Ariz.

Mr. Hardy says that he had a rather unpleasant experience with the Yaqui Indians. The La Barranca mine is about one mile from the town, and the able-bodied men are employed in the mine, so that no one is left in the town during the day except women, children, and aged men. In the afternoon several women came screaming out to the mine, and Mr. Hardy, thinking that a band of savages were approaching, saddled a horse and rode as rapidly as possible into town. Just as he was surprised to have a band of Yaqui Indians surround him. They compelled him to dismount, and stood him up alongside of several other prisoners.

One of the gang then led his horse away. For two hours he was kept prisoner while the Indians completely sacked the town, taking everything from the store, robbing all the houses, and carrying off the children's feet, and rings from the women's fingers. This is the second time that La Barranca has been sacked during the last two months.

George H. Crowe, one of the prominent mining men of Sonora, has returned from a three months' absence in New York and Pittsburgh. On his return he made an extensive examination of some placer claims in California. Mr. Crowe says that the United States is experiencing a great wave of prosperity, and people are waiting for an assurance that peace is permanently restored to bring their capital into the west coast.

### MINES NEAR ALPINE ARE TO BE WORKED

Turney and Caruthers Lease to A. M. Turney the Caruthers Silver and Lead Mines.

Alpine, Tex., Nov. 30.—James La-farelli and Dr. W. B. Phillips have begun work on the Bird silver mine, about 12 miles to the east of Alpine. They plan to sink a number of test shafts and to ascertain beyond doubt the value of the property. If their report is favorable, a large force of miners will be put to work.

W. W. Turney and A. M. Caruthers have leased to A. M. Turney for a period of 25 years, the property known as the Caruthers Silver and Lead mine, located about 10 miles east of Alpine. At one time this mine was operated on a small scale, and the ore sold for \$85 a ton. Judge Turney is reticent about the details of his plans, but he states that work will be begun in the mine very soon. The leads have been thoroughly tested by experts who have given an entirely favorable report.

### TREASURY MILL READY FOR WORK

Is Modern and Has Capacity of 50 Tons Daily; District Is Looking Up.

The new mill at the U. S. Treasury mine at Chiricahua, in the Black Range of New Mexico, is ready to start regular work in treatment of the ores of the mine. This mill is modern in every respect. It has Morrison crushers which pulverize the ore to 100-mesh and upward, the over size from the screen being returned to the mill for regrinding. This crusher is something like the ordinary tube mill, differing, however, in that the quartz of the ore does its own grinding instead of employing flint pebbles as in the tube mill system. The company has spent considerable time and money in testing, extending for over a year, and knows what it is doing. The ordinary capacity of the mill is 50 tons a day. If it cuts the time of leaching from 40 to 20 hours, the capacity will be doubled.

Ore Running Up To Pictures. Edward J. James, former manager, says: There is a large ore reserve in the U. S. Treasury mine from low grade up to "picture" ore, the smaller streaks running into the thousands of dollars per ton in gold and silver values. It is a silicious ore, and is of a chloro-bromine character, with a small percentage of sulphides. The treatment process installed is of the continuous order and nothing has been overlooked by which the cost of treatment of the ore can be reduced.

A shaft 300 feet deep with several hundred feet of lateral work has been made which has proved up the ore body and justified the installation of the present plant.

Silver Monument Shipping High Grade. "It looks mighty good to us old timers in the Apache mining district, as our region is called, to see the best string of ore workings and veins consisting of about 40 head of animals, conveying the high grade ore from the Silver Monument mining property over the long road to Eagle, by way of Elephant Butte, which is the nearest railroad shipping station to El Paso. Aside from their shipping-grade streak of ore, which is three and a half feet wide, ranging from \$150 to \$200 per ton in silver and copper ore of a berillite character, the Silver Monument has also from 12 to 15 feet of ore running from \$20 to \$25 per ton, which is considered the low grade material. There is a movement on foot to install a reduction plant on this property to handle this low grade material.

"The old workings of this property have been opened by a long cross cut tunnel, not less than 1500 feet in length, which was of course all dead work; but upon cutting the vein and development along its course, has exposed the ore body below the old workings in two different places, which is evidence that the ore shoots are contained below the level of the cross cut tunnel.

"The sum total of the mining future of the Black Range," says Mr. James, "is most promising. The best showings in the country are made by people that did the most work. The district has been handicapped by distance from railroad. A railroad into that district would render vast amounts of low grade and commercial ore, and make the Black Range a wonderful mining dis-

### FOR A NEW MILL PLANT

Hayden, Ariz., Nov. 30.—Neils Johnson, chief draftsman for the Ray Consolidated Copper company, has returned from a month's business trip west at the properties of the Alaska Gold Mines company, at Juneau, Alaska. Mr. Johnson will work on plans for the new mill from this office, until next summer, when active construction work will be started.

### IF YOU MUST KISS, BE SURE AND BOIL 'EM

Sweethearts at Wheeling, W. Va., May Now Osculate Without Fear of Being Locked in Jail.

Wheeling, Va., Nov. 30.—"Boil your kisses" is the slogan of health fastidists here. Sweethearts may now kiss without fear of being locked in the Wheeling jail, but they have been cautioned that the osculatory apparatus should be properly disinfected and made germ proof before using.

The message of the Wheeling board of health to those who osculate, is: "Lovers and others who are inclined toward osculation are advised to cleanse their lips regularly, as disease may be transmitted through the common habit of kissing."

This is a substitute recommendation for a resolution which was brought up by a member prohibiting kissing entirely here. The resolution was strongly urged owing to the large number of infectious diseases that have prevailed in this territory during the last few years.

Rancor has been made the butt of jokes, cartoonists and humorists the world over, a majority of the members of the board of health agreed to appease the righteous wrath of the opponents of kissing and issue a warning to all who are inclined to enjoy the sweets of osculation, advising them to use extreme care in cleansing their lips and cheeks before indulging the pastime.
